## SECTION I. INTRODUCTION

### A. RISK FACTORS

#### Standard Risk Factors:

- Investment in mutual fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk, including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invest fluctuates, the value of your investment in the Scheme may go up or down. In addition to the factors that affect the value of individual investments in the Scheme, the NAV of the Scheme can be expected to fluctuate with movements in the broader equity and bond markets and may be influenced by factors affecting capital and money markets in general, such as, but not limited to, changes in interest rates, currency exchange rates, changes in Governmental policies, taxation, political, economic or other developments and increased volatility in the stock and bond markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Mutual Fund.
- The present Scheme is not a guaranteed or assured return Scheme.

#### Additional Risk Factors for Foreign Investors:

##### i. Political Risk

Investments in mutual fund Units in India may be materially adversely impacted by Indian politics and changes in the political scenario in India either at the central, state or local level. Actions of the central government or respective state governments in the future could have a significant effect on the Indian economy, which could affect companies, general business and market conditions, prices and yields of securities in which the Scheme invest.

The occurrence of selective unrest or external tensions could adversely affect the political and economic stability of India and consequently have an impact on the securities in which the Scheme invests. Delays or changes in the development of conducive policy frameworks could also have an impact on the securities in which the Scheme invests.

##### ii. Economic Risk

A slowdown in economic growth or macro-economic imbalances such as the increase in central and state level fiscal deficits may adversely affect investments in the country. The underlying growth in the economy is expected to have a direct impact on the volume of new investments in the country.

##### iii. Foreign Currency Risk

The Scheme is denominated in Indian Rupees (INR) which is different from the home currency for Foreign Investors in the mutual fund Units. The INR value of investments when translated into home currency by Foreign Investors could be lower because of the currency movements. The AMC does not manage currency risk for foreign investors and it is the sole responsibility of the Foreign Investors to manage or reduce currency risk on their own. The Sponsor/Fund/Trustees/AMC are not liable for any loss to Foreign Investors arising from such changes in exchange rates.

##### iv. Convertibility and Transferability Risk

In the event capital and exchange controls are imposed by the government authorities, it would prevent Foreign Investors' ability to convert INR into home currency and/or transfer funds outside India. The convertibility and transferability of INR proceeds into home currency is the responsibility of the Foreign Investors.

#### 1) Risk Factors associated with Exchange traded schemes:

##### a. Passive Investments:

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets. The value of the Scheme's investments, may be affected generally by factors affecting equity markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down

#### **b. Tracking Error and Tracking Difference Risk:**

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the respective scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index. **"Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the respective scheme. "Tracking Difference" is the annualized difference of daily returns between the Index and the NAV of the scheme (difference between fund return and the index return).** Tracking Error and Tracking difference may arise including but not limited to the following reasons:

- i. Expenditure incurred by the fund.
- ii. The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The fund may not be invested at all time as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
- iii. Securities trading may halt temporarily due to circuit filters.
- iv. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
- v. Rounding off of quantity of shares in underlying index.
- vi. Dividend payout.
- vii. Disinvestments to meet redemptions, recurring expenses, IDCW payouts etc.
- viii. Execution of large buys / sell orders
- ix. Transaction cost (including taxes and insurance premium) and recurring expenses
- x. Realization of Unit holders funds
- xi. Index providers may either exclude or include new scrips in their periodic review of the scrips that comprise the underlying index. In such an event, the Fund will try to reallocate its portfolio but the available investment/reinvestment opportunity may not permit absolute mirroring immediately.

SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.

It will be the endeavor of the fund manager to keep the tracking error as low as possible. However, in case of events like, dividend received from underlying securities, rights issue from underlying securities, and market volatility during rebalancing of the portfolio following the rebalancing of the underlying index, etc. or in abnormal market circumstances may result in tracking error. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index.

#### **2) Risks pertaining to transaction in listed units:**

- a) **Absence of Prior Active Market:** Although the Scheme is listed on Stock Exchange, there can be no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the Units of the Scheme would be infrequent.
- b) **Trading in Units may be Halted:** Trading in the Units of the Schemes on Stock Exchange may be halted because of market conditions or for reasons that in view of Stock Exchange or SEBI,

trading in the Units of the Schemes are not advisable. In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to Stock Exchange and SEBI circuit filter rules. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of the Units of the Schemes will continue to be met or will remain unchanged.

- c) **Units of the Schemes May Trade at Prices Other than NAV:** The Units of the Schemes may trade above or below their NAV. The NAV of the Schemes will fluctuate with changes in the market value of the holdings of the Schemes. The trading prices of the Units of the Schemes will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the Schemes. However, given that Units of the Schemes can be created and redeemed in Creation Units directly with the Fund.
- d) **Other Risk related to listed units:** The units will be issued only in dematerialized form through depositories. The records of the depository are final with respect to the number of units available to the credit of unit holder. Settlement of trades, repurchase of units by the mutual fund during the liquidity window depend upon the confirmations to be received from depository (ies) on which the mutual fund has no control.

Investors may note that the scheme would only repurchase units from the Market Makers & Large Investors in eligible Creation Unit Size. Thus unit holdings less than the eligible Creation Unit Size can only be sold through the secondary market on the exchanges

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. However, units of the Scheme can only be subscribed in demat mode. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

Any changes in trading regulations by Stock Exchange or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV.

**3) Risk of Substantial Redemptions:** The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to sell intended securities due to liquidity & settlement problems, could cause delay for processing the large number of direct redemptions. The Trustee, in the general interest of the Unit holders of the Schemes offered under this SID and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Working Day depending on the total "Saleable Underlying Stock" available with the Fund.

**4) Risk associated with use of derivatives:** The Scheme may periodically invest in derivative securities e.g. when a stock(s) is entering/exiting the benchmark index. However, the Scheme will not use derivative instruments for speculative purposes or to leverage its net assets. There may be a cost attached to buying index futures or other derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares

Derivatives require the maintenance of adequate controls to monitor the transactions and the embedded market risks that they add to the portfolio. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to:

- **Counterparty Risk** - this occurs when a counterparty fails to abide by its contractual obligations and therefore, the Scheme are compelled to negotiate with another counter party, at the then prevailing (possibly unfavourable) market price. For exchange traded derivatives, the risk is mitigated as the exchange provides the guaranteed settlement but one takes the performance risk on the exchange.

- **Market Liquidity Risk** - this occurs where the derivatives cannot be transacted due to limited trading volumes and/or the transaction is completed with a severe price impact.
- **Model Risk** - the risk of mis-pricing or improper valuation of derivatives.
- **Basis Risk** - arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.

Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place.

- The option buyer's risk is limited to the premium paid
- Investments in index/stock futures face the similar risk as the investments in the underlying stock or index.
- Risk of loss in trading in futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potentially high volatility of the futures markets.
- The derivatives market may not have the volumes that may be seen in other developed markets, which may result in volatility in the values.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

**5) Risks associated with Equity Investments:** Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. Also, the value of the Scheme investments may be affected by interest rates, changes in law/ policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors. Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.

**6) Risk Factors associated with investments in Fixed Income Securities:**

- **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. However, debt securities in this scheme are intended to be held till maturity. For such securities held till maturity, there will not be any interest rate risk at the end of the tenure.
- **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation Yield-to-Maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today's characteristic of the Indian fixed income market.
- **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Pre-payment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

- **Risk factors associated with investment in Tri-Party Repo:** The mutual fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/ default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund

**7) Liquidity risks:** The Schemes may not be able to immediately sell certain types of illiquid Securities. The prices and subsequent valuation of restricted and illiquid Securities may reflect a premium / discount, which may be significant, from the market price of comparable Securities for which a liquid market exists.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Scheme(s) can go up and down because of various factors that affect the capital markets in general.

**8) Risk associated with Securities Lending & Borrowing and Short Selling:** Securities Lending and Borrowing ("SLB") is an exchange traded product in India, with trades done on order matching platforms setup by the clearing corporation/house of recognized stock exchanges. In accordance with SEBI guidelines, there is a robust risk management system and safeguards exercised by the clearing corporation/house, which also guarantee financial settlement hence eliminating counterparty risk on borrowers.

The Scheme may participate as a lender in the SLB market and lend securities held in the portfolio for earning fees from such lending to enhance revenue of the Scheme. The key risk to the Scheme is creation of temporary illiquidity due to the inability to sell such lent securities, till the time such securities are returned on the contractual settlement date or on exercise of early recall.

The Scheme may enter into short selling transactions in accordance with the guidelines prescribed by SEBI. - **Re-investment Risk:** The Investment Manager will endeavor that besides the tactical and/or

strategic interest rate calls, the portfolio is fully invested.

- **Risk associated with Stock Lending:** The AMC will have appropriate controls (including limits) before initiating any such transactions to ensure that the risk associated to Stock lending is minimised

## SECTION II - INFORMATION ABOUT THE SCHEME

### A. TYPE OF THE SCHEME

An open ended scheme replicating/ tracking Nifty Bank Index

### B. WHAT IS THE INVESTMENT OBJECTIVE OF THE SCHEME?

The Scheme seeks to provide returns that, before expenses, correspond to the total return of the underlying index, subject to tracking errors.

**There is no assurance that the investment objective of the Scheme will be realized.**

### C. HOW WILL THE SCHEME ALLOCATE ITS ASSETS?

Under normal circumstances, it is anticipated that the asset allocation of the Scheme shall be as follows:

Instruments	Indicative allocations (% of total assets)		Risk Profile
	Minimum	Maximum	
Equity and Equity Related Securities of companies constituting Nifty Bank Index, the Underlying Index	95%	100%	Very High
Cash and Cash Equivalents@	0%	5%	Low to Medium

@Cash and Cash Equivalents will include following securities having residual maturity of less than 91 Days:

1. TREPS,
2. Treasury Bills,
3. Government securities, and
4. Repo on Government Securities and any other securities as may be allowed under the regulations prevailing from time to time.

The Scheme shall not invest in ADR/GDR/overseas securities.

The Scheme will not invest in Securitized Debt.

The Scheme will not participate in repo of corporate debt securities.

The Scheme will not invest in Credit Default Swaps.

The scheme will not invest in securities covered under SEBI circular SEBI/HO/IMD/DF4/CIR/P/2021/032 dated March 10, 2021.

The Scheme will not invest in debt instruments having structured obligations and credit enhancements.

The underlying index shall comply with the below restrictions in line with SEBI circular no. SEBI/HO/IMD/DF3/CIR/P/2019/011 dated January 10, 2019.

The net assets of the scheme will be invested in stocks constituting the Nifty Bank Index. This would be done by investing in all the stocks comprising the Nifty Bank Index in the same weightage that they represent in the Nifty Bank Index. A small portion of the net assets will be invested in Cash and Cash Equivalents.

Exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions for a temporary period on defensive considerations and portfolio shall be rebalanced within 7 calendar days.

Index futures/options are meant to be an efficient way of buying/selling an index compared to buying/selling a portfolio of physical shares representing an index for ease of execution and settlement. It can help in reducing the Tracking Error in the Scheme. Index futures/options may avoid the need for trading in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the individual stocks. Equity Derivatives can be used as a tool for cash equitization and where the fund has got cash (within the

maximum permissible asset allocation table), in case where rebalance comes, then instead of cash, index contract can be used for temporary basis. Index futures/options can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares comprising the underlying index and will be easy to settle compared to physical portfolio of shares representing the underlying index. In case of investments in index futures/options, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future/option. The Scheme will not maintain any leveraged or trading positions. Exposure to such derivatives will be restricted to 20% of net assets of the scheme. However, investment in derivatives will be for a temporary period on defensive considerations. The Scheme shall rebalance the portfolio in case of any deviation to the asset allocation. Such rebalancing shall be done within 7 calendar days from the date of such deviation.

The Scheme will not lend more than 20% of its corpus and not more than 5% of its corpus can be deployed through single intermediary. The Scheme will enter into securities lending in accordance with the framework specified by SEBI in this regard.

The cumulative gross exposure through equity, Derivative position and other permitted securities/ asset class as may be permitted by the Board from time to time subject to regulatory approvals, if any should not exceed 100% of the net assets of the scheme.

The Scheme may enter into short selling transactions in accordance with the guidelines prescribed by SEBI.

#### **Portfolio rebalancing:**

Any alteration in the investment pattern will be for a short term on defensive considerations as per SEBI Circular no. SEBI/HO/IMD/DF2/CIR/P/2021/024 dated March 4, 2021; the intention being at all times to protect the interests of the Unit Holders and the Scheme shall rebalance the portfolio within 7 calendar days.

It may be noted that no prior intimation/indication will be given to investors when the composition/asset allocation pattern under the Scheme undergoes changes within the permitted band as indicated above.

In line with SEBI Circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 dated May 23, 2022, in case of change in constituents of the index due to periodic review, the portfolio of Scheme shall be rebalanced within 7 calendar days.

Further, any transactions undertaken in the portfolio of Index Schemes in order to meet the redemption and subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the index is maintained at all points of time.

#### **CHANGE IN INVESTMENT PATTERN**

The Scheme, will hold all the securities that comprise the underlying Index in the same proportion as the index.

Expectation is that, over a period of time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low. The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error is not expected to exceed by 2% p.a. for daily 12 month rolling return. However, in case of events like, dividend issuance by constituent members, rights issuance by constituent members, and market volatility during rebalancing of the portfolio following the rebalancing of the Underlying Basket, etc. or in abnormal market circumstances, the tracking error may exceed the above limits. Since the scheme is an exchange traded fund, it will endeavor that at no point of time the scheme will deviate from the index.

In the interest of investors and on defensive considerations, the AMC reserves the right to change the above asset allocation pattern due to corporate action activity undertaken in the underlying securities. The Scheme shall rebalance the portfolio in case of any deviation to the asset allocation. Such rebalancing shall be done within 7 days from the date of such deviation.

#### **D. WHERE WILL THE SCHEME INVEST?**

The corpus of the Scheme will invest in Securities which are constituents of Nifty Bank Index and in Cash and Cash Equivalents.

- vii. AMC will not charge any investment management and advisory fees for parking of funds in short term deposits of scheduled commercial banks.

The above provisions do not apply to term deposits placed as margins for trading in cash and derivative market.

Further, due to corporate action in companies comprising of the index, the scheme may be allocated/allotted securities which are not part of the index. For example, the Fund may invest in stocks not included in the relevant underlying index in order to reflect various corporate actions (such as mergers) and other changes in the relevant underlying index (such as reconstitutions, additions, deletions and these holdings will be in anticipation and in the direction of impending changes in the underlying index)

For the purpose of liquidity, the Scheme may invest in Liquid/Overnight Scheme managed by the same AMC or by the AMC of any other Mutual Fund without charging any fees on such investments, provided that aggregate inter-scheme investment made by all schemes managed by the same AMC or by the AMC of any other Mutual Fund shall not exceed 5% of the net asset value of the Fund.

Index futures/options can be an efficient way of achieving the Scheme's investment objective. Notwithstanding the pricing, they can help in reducing the Tracking Error in the Scheme. Index futures/options may avoid the need for trading in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the individual stocks. Index futures/options can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares comprising the underlying index and will be easy to settle compared to physical portfolio of shares representing the underlying index.

In case of investments in index futures/options, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future/option. The Scheme will not maintain any leveraged or trading positions.

#### **Purpose of investment in Derivatives**

- a) The Scheme shall fully cover its positions in the Derivatives market by holding underlying Securities/cash or cash equivalents/option and/or obligation for acquiring underlying assets to honour the obligations contracted in the Derivatives market.
- b) The Securities held would be marked to market by the AMC to ensure full coverage of investments made in Derivative products at all times.

#### **Trading in Derivatives**

The Mutual Fund may use various derivatives only for the purpose of Portfolio Rebalancing of the Scheme. Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index. The Scheme while investing in equities shall transact in exchange traded equity derivatives only and these instruments may take the form of Index Futures, Index Options, Futures and Options on individual equities/securities and such other derivative instruments as may be appropriate and permitted under the SEBI Regulations and guidelines from time to time.

#### **Key features of Trading in Derivatives**

The use of derivatives provides flexibility to the Schemes only for the purpose of Portfolio Rebalancing. The following section describes some of the more common derivatives transactions with illustrations.

Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index, such as interest rates, exchange rates, commodities and equities.

#### **1. Futures**

A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Currently, futures contracts have a maximum expiration cycle of 3 months. Three contracts are available for trading, with 1 month, 2 months and 3 months expiry respectively. A new contract is introduced on the next trading day following the expiry of the relevant monthly contract. Futures contracts typically expire on the last Thursday of the month. For example a contract with the December 2021 expiration expires on the last Thursday of December 2021 (December 31, 2021).

#### **Basic Structure of an Index Future**

The Stock Index futures are instruments designed to give exposure to the equity markets indices. The Stock Exchange, Mumbai (BSE) and The National Stock Exchange (NSE) have trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and short-term interest rates. Index futures are cash settled, there is no delivery of the underlying stocks.

**Example using hypothetical figures:**

**1-month ABC Index Future**

If the Scheme buys 2,000 futures contracts, each contract value is 50 times the futures index price.

Purchase Date	:	December 01, 2021
Spot Index	:	13800.00
Future Price	:	13900.00
Date of Expiry	:	December 31, 2021
Margin	:	10%

Assuming the exchange imposes a total margin of 10%, the Investment Manager will be required to provide a total margin of approx. Rs. 1390,000,000 (i.e.  $10\% \times 13900 \times 2000 \times 50$ ) through eligible securities and cash.

Assuming on the date of expiry, i.e. December 31, 2021, ABC Index closes at 13950, the net impact will be a profit of Rs. 5,000,000 for the Scheme, i.e.  $(13950 - 13900) \times 2000 \times 50$  (Futures price = Closing spot price = Rs. 13950.00)

Profits for the Scheme =  $(13950 - 13900) \times 2000 \times 50 = \text{Rs. } 5,000,000$ .

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity.

The net impact for the Scheme will be in terms of the difference of the closing price of the index and cost price. Thus, it is clear from the above example that the profit or loss for the Scheme will be the difference between the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mispricing of the futures.

**Basic Structure of a Stock Future**

A futures contract on a stock gives its owner the right and obligation to buy or sell stocks. Single Stock Futures traded on NSE (National Stock Exchange) are physically settled; on the expiration day, depending upon the side of the trade, security is either delivered or received against the payment. A purchase or sale of futures on a security gives the trader essentially the same price exposure as a purchase or sale of the security itself. In this regard, trading stock futures is no different from trading the security itself.

**Example using hypothetical figures:**

The Scheme holds shares of XYZ Ltd., the current price of which is Rs. 500 per share. The Scheme sells one month futures on the shares of XYZ Ltd. at the rate of Rs. 540.

If the price of the stock falls, the Mutual Fund will suffer losses on the stock position held. However, in such a scenario, there will be a profit on the short futures position.

At the end of the period, the price of the stock falls to Rs. 450 and this fall in the price of the stock results in a fall in the price of futures to Rs. 470. There will be a loss of Rs. 50 per share (Rs. 500 - Rs. 450) on the holding of the stock, which will be offset by the profits of Rs. 70 (Rs. 540 - Rs. 470) made on the short futures position.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins and other related costs have

been ignored. The risks associated with stock futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mis-pricing of the futures.

## 2. Options

An option gives a person the right but not an obligation to buy or sell something. An option is a contract between two parties wherein the buyer receives a privilege for which he pays a fee (premium) and the seller accepts an obligation for which he receives a fee. The premium is the price negotiated and set when the option is bought or sold. A person who buys an option is said to be long in the option. A person who sells (or writes) an option is said to be short in the option.

**An option contract may be of two kinds:**

### 1) Call option

An option that provides the buyer the right to buy is a call option. The buyer of the call option can call upon the seller of the option and buy from him the underlying asset at the agreed price. The seller of the option has to fulfill the obligation upon exercise of the option.

### 2) Put option

The right to sell is called a put option. Here, the buyer of the option can exercise his right to sell the underlying asset to the seller of the option at the agreed price.

Option contracts are classified into two styles:

#### (a) European Style

In a European option, the holder of the option can only exercise his right on the date of expiration only.

#### (b) American Style

In an American option, the holder can exercise his right anytime between the purchase date and the expiration date.

### Basic Structure of an Equity Option

In India, options contracts on indices and stocks are European style and physically settled

### Example using hypothetical figures:

Market type	: N
Instrument Type	: OPTSTK
Underlying	: XYZ Ltd. (XYZ)
Purchase date	: December 1, 2021
Expiry date	: December 31, 2021
Option Type	: Put Option (Purchased)
Strike Price	: Rs. 5,750.00
Spot Price	: Rs. 5,800.00
Premium	: Rs. 200.00
Lot Size	: 100
No. of Contracts	: 50

Say, the Mutual Fund purchases on December 1, 2021, 1 month Put Options on XYZ Ltd. (XYZ) on the NSE i.e. put options on 5000 shares (50 contracts of 100 shares each) of XYZ.

If the share price of XYZ Ltd. falls to Rs. 5,500 /- on December 31, 2021 and the Investment Manager decides to exercise the option, the impact will be as Follows:

Premium Expense = Rs. 200 \* 50 \* 100 =  
Rs. 10, 00,000/-

Stocks to be given at = Rs. 5,750/-

Profits for the Mutual Fund = (5,750.00-5,500.00)\*50\*100  
= Rs. 12, 50,000/-

Net Profit = Rs. 12, 50,000 - Rs. 10,00,000 = Rs. 2,50,000/-

In the above example, the Investment Manager hedged the market risk on 5000 shares of XYZ Ltd. by purchasing put options.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins have been ignored. The purchase of Put Options does not increase the market risk in the Mutual Fund as the risk is already in the Mutual Fund's portfolio on account of the underlying asset position (in his example shares of XYZ Ltd.). The Premium paid for the option is treated as an expense and added to the holding cost of the relevant security. Additional risks could be on account of illiquidity and potential mis-pricing of the options.

#### **Exposure to Equity Derivatives**

##### **i. Position limit for the Mutual Fund in index options contracts:**

- a. The Mutual Fund position limit in all index options contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest in the market in index options, whichever is higher, per Stock Exchange.
- b. This limit would be applicable on open positions in all options contracts on a particular underlying index.

##### **ii. Position limit for the Mutual Fund in index futures contracts:**

- a. The Mutual Fund position limit in all index futures contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest in the market in index futures, whichever is higher, per Stock Exchange.
- b. This limit would be applicable on open positions in all futures contracts on a particular underlying index.

##### **iii. Position limit for the Mutual Fund for stock based derivative contracts:**

The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL).

##### **iv. Position limit for the Scheme:**

The position limits for the Scheme and disclosure requirements are as follows:

- a. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a Fund shall not exceed the higher of 1% of free float market capitalization (in terms of number of shares).  
Or  
5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).
- b. This position limit shall be applicable on the combined position in all derivative contracts on a underlying stock at a Stock Exchange.
- c. For index based contracts, the Mutual Fund shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

**As and when SEBI notifies amended limits in position limits for exchange traded derivative contracts in future, the aforesaid position limits, to the extent relevant, shall be read as if they were substituted with the SEBI amended limits.**

#### **Exposure Limits:**

With respect to investments made in derivative instruments, the Scheme shall comply with the following exposure limits in line with SEBI Circular Cir/IMD/DF/11/2010 dated August 18, 2010, point C (1) of Circular SEBI/HO/IMD/DF2/CIR/P/2021/024 dated March 04, 2021 and SEBI Circular no. SEBI/HO/IMD/IMD-I DOF2/P/CIR/2021/580 dated June 18, 2021:

1. The cumulative gross exposure through equity, debt, derivative positions other permitted securities/assets and such other securities/assets as may be permitted by SEBI from time to time should not exceed 100% of the net assets of the scheme. However, the following shall not be considered while calculating the gross exposure:
  - a. Security-wise hedged position and
  - b. Exposure in cash or cash equivalents with residual maturity of less than 91 days
2. The total exposure related to option premium must not exceed 20% of the net assets of the Scheme.
3. The Mutual Fund shall not write options or purchase instruments with embedded written options.
4. Definition of Exposure in case of Derivative Positions:  
Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option Bought	Option Premium Paid * Lot Size * Number of Contracts

#### **E. WHAT ARE THE INVESTMENT STRATEGIES?**

The Scheme will track its Underlying Index and will use a “passive” or indexing approach to endeavor to achieve scheme’s investment objective. The scheme will neither try to beat the index it tracks nor take active approach in times when markets seem to be over/under valued. The AMC does not make any judgments about the investment merit of a particular stock or a particular industry segment nor will it attempt to apply any economic, financial or market analysis. Since the scheme is an exchange traded fund, the scheme will only invest in the security constituting the underlying index.

Since the scheme is an exchange traded fund, it will endeavor that at no point of time the scheme will deviate from the index.

#### **PORTFOLIO TURNOVER**

Portfolio Turnover measures the volume of trading that occurs in a Scheme’s portfolio during a given time period. The Scheme is an open-ended Exchange Traded Fund and it is expected that there may be a number of subscriptions and repurchases on a daily basis through Stock Exchange(s) or Market Makers and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition, if any, and corporate actions of securities included in Nifty Bank Index. However, it will be the endeavor of the Fund Manager to maintain an optimal portfolio turnover rate commensurate with the investment objective of the Scheme and the purchase/ redemption transactions on an ongoing basis in the Scheme.

#### **TRACKING ERROR & TRACKING DIFFERENCE**

Tracking Error may arise due to reasons including but not limited to the following: -

- a. Expenditure incurred by the fund.
- b. The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The fund may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
- c. Securities trading may halt temporarily due to circuit filters.

- d. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
- e. Rounding off quantity of shares in underlying index.
- f. Dividend payout.
- g. Disinvestments to meet redemptions, recurring expenses, IDCW payouts etc.
- h. Execution of large buy / sell orders
- i. Transaction cost (including taxes and insurance premium) and recurring expenses
- j. Realization of Unit holder's funds

It will be the endeavor of the fund manager to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2% per annum. However, in case of events like, dividend received from underlying securities, rights issue from underlying securities, and market volatility during rebalancing of the portfolio following the rebalancing of the underlying index, etc. or in abnormal market circumstances, the tracking error may exceed the above limits. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index.

Tracking Error of the Index Schemes based on past one year rolling data, shall be disclosed on a daily basis, on the website of AMC i.e. [www.dspim.com](http://www.dspim.com) and AMFI.

#### **Tracking Difference:**

Tracking Difference is defined as the annualized difference of daily returns between the index and the NAV of the ETF Schemes.

Tracking difference of the Scheme shall be disclosed on the website of the AMC i.e. [www.dspim.com](http://www.dspim.com) and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

## INTRODUCTION TO EXCHANGE TRADED FUNDS

An ETF is a passively managed product that provides exposure to an index or a basket of securities with the objective of generating returns as close to the index as possible. The key benefit of an ETF over traditional open-ended index funds is liquidity and availability of real-time market price on stock exchange. They can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. ETFs provide investors a fund that tracks the performance of an index with the ability to buy/sell on an intra-day basis. ETFs are structured in a manner which allows creating new units (called creation units) and redeem outstanding units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs are usually passively managed funds wherein subscription/redemption of units works on the concept of exchange with underlying securities. In other words, large investors/institutions can purchase units by depositing the underlying securities with the mutual fund/AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange. ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the

Creation/Redemption of units through the in-kind mechanism the mutual fund can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower.

### Benefits of ETFs

- a. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
- b. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at nearly the real-time prices as opposed to end of day prices.
- c. Ability to put limit orders.
- d. Protects long-term investors from the inflows and outflows of short-term investors. This is because the fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.
- e. Flexible as it can be used as a tool for gaining instant exposure to the equity markets, equitising cash, for arbitraging between the cash and futures market.

### Market for ETFs:

The assets-under-management for ETFs which was approx. Rs 3,800 crores as of September 2010 has grown to nearly Rs. 4,43,834 crores in July 2022. The primary categories of ETFs in India are: Nifty 50 and Sensex based ETFs. Government Disinvestment mandates like CPSE, Bharat 22 and Bharat Bond, Banking Sector ETFs, and Gold. There are also few fixed income, smart beta, sectoral and thematic ETFs, tracking specified indices. Given the ETF market globally has grown significantly over the past few years, there is a strong case that the size and breadth of the ETF market has a potential go up in India in years to come.
