		have access to liquidity through maturity proceeds of the portfolio holdings.
	Credit Risk	Credit Risk associated with fixed income securities will be managed by making investments in securities issued by borrowers, which have a good credit profile. The credit research process includes a detailed in-house analysis and due diligence. Limits are assigned for each of the issuer (other than government of India); these limits are for the amount as well as maximum permissible tenor for each issuer. The credit process ensures that issuer level review is done at inception as well as periodically by taking into consideration the balance sheet and operating strength of the issuer. The Investment Manager will endeavour to actively manage the duration based
	Structure of Interest Rates (TSIR) Risk	on the ensuing market conditions. As the primary investments of the Scheme are very short duration in nature, the risk can be expected to be small
	Risk associated with investments in repo of corporate debt securities	The preference will be for tripartite repos executed on the exchange platforms where the settlement guarantee and collateral management will be managed by the exchange. In case of bilateral repo transactions, the Investment Manager will endeavor to manage counterparty risk in corporate debt repos by dealing only with counterparties having strong credit profiles. These could include SEBI regulated mutual funds, RBI regulated Banks, Non-Banking Finance Companies, Primary Dealers and IRDA regulated Insurance companies. Corporates for whom credit limits have been assigned are eligible counterparties. These corporates should have a minimum investment grade credit rating. For new counterparties, approval from Head - Risk will be taken.
		The collateral risk is mitigated by restricting participation in repo transactions only in AA and above rated money market and corporate debt securities, where potential for downgrade/default is low. In addition, appropriate haircuts are applied on the market value of the underlying securities to adjust for the illiquidity and interest rate risk on the underlying instrument.
