

THE NAVIGATOR

What do I do with my money?

June 2023

Objective: Why Navigator?

1. At DSP, we aim to help investors identify the right theme/fund at the right time for a smoother journey. In the past, we have stopped subscriptions to DSP Small Cap fund, gave a buy call on DSP Healthcare Fund, gave a sell on commodities and a buy on financials at the most opportunistic times
2. The team at DSP crafts many knowledge enhancing products such as Netra, Tathya, The Transcript, The Report Card, Converse etc. Navigator aims to bring some of these insights together and recommends funds too
3. For anyone interested in knowledge enhancement, it offers a rounded perspective on drivers of returns- earnings, valuations, macros, flows, interest rates and gives pointed views on asset classes.

The Drivers Of Returns

- Valuations
- Earnings
- Macros & Flows
- Interest rate cycle

Navigating today: What Are We Saying?

1. India has done reasonably well, taking the valuations to average. At this juncture, while we see volatility ahead, we recommend to stick to equity allocation of 60%, as previously advocated in Navigator, Mar-23
2. Excessive monetary tightening can take away growth. India, however, is doing well. If inflation eases faster than expected, some more positive surprise can come through
3. The sectors that we recommended in the March edition: Banking, Automobiles, Pharmaceuticals/ Healthcare have done reasonably well and we continue to stay with them. Additionally, margin expansion has finally come through and we are scouting opportunities in cement and agrochemicals
4. **We reiterate, we are in a multi-year bull market with intermittent pull backs and corrections. Asset allocation can smoothen the journey**
5. In fixed income, there's a consolidation phase. Change in data can bring the next rally in bonds. We recommend to wait for the data to change before adding further to duration.

Valuations: At Average

Valuations Are Average, Stick To Similar Equity Allocation

In the last Navigator, we had said that NIFTY 50 below 17,400 should be used as an opportunity to add equity (NIFTY 50 Index as on 15th March was 16972). Markets did provide an opportunity to raise equity allocation. As we stand today, NIFTY 50* Index has risen to 18710 levels.

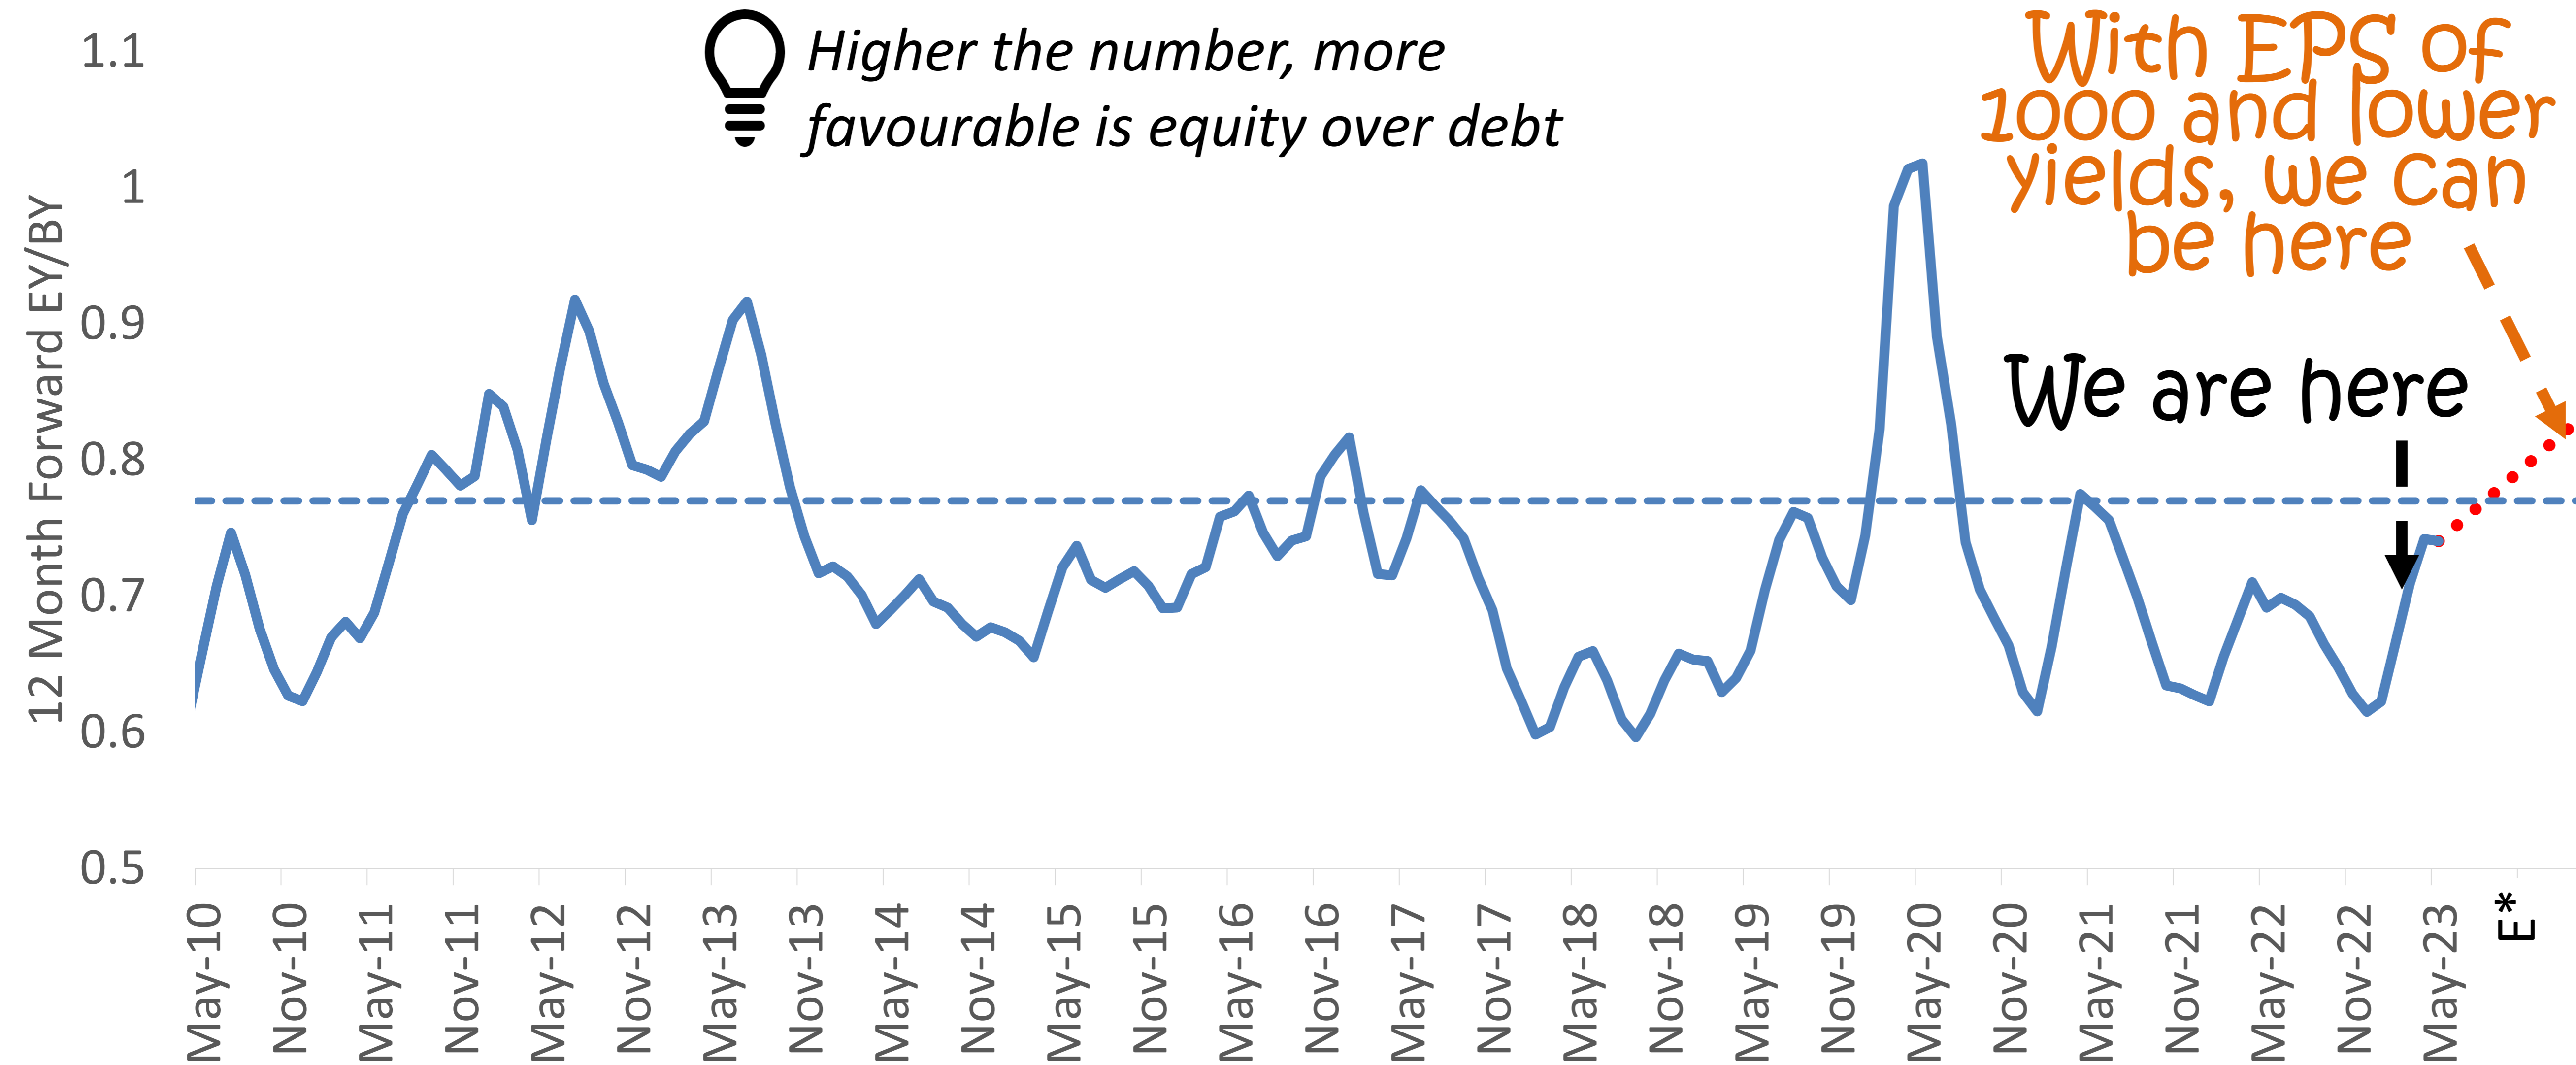

Today, we think not much needs to be changed in equity allocation of 60%. Inaction can sometimes be the biggest action. Is all glorious? We don't know. All we know is that there are more positives than negatives.

Earnings downgrade have been cooked into valuations and less likely ahead, FII flows have turned positively, and economic growth is steady.

Therefore, our call is to stick to equity levels of 60%. We acknowledge that valuations are slightly above average but remain within our comfort zone.

Easing Of Interest Rates + Better Earnings Is Positive For Equity

The view of lower interest rate ahead bodes well for relative valuation for equity. Sticking to equity allocation is possibly the best thing to do

Domestic earnings have been strong. The interest rate cycle is expected to turn towards lower interest rates. Indian companies usually see good earnings momentum when interest rates fall. Can this be that kind of year? Possibly, yes.

There is a possibility of a delay in monetary easing. This remains a key risk to this hypothesis. RBI's policy stance in the upcoming policy could be an indicator for possible easing or a long pause for the rest of FY24.

Even On Relative Front, Valuations Appears Pretty Average

India is trading at some premium to EMs but the premium isn't at warning levels. Good earnings will aid India.

India has historically commanded some premium to EMs. Off late, the premium has increased as the EM valuation fell sharply. However, even within the EM basket, there are very few countries which are promising a combination of good earnings and reasonable valuations.

Given the fundamentals, it makes sense to stick to the India equity allocation. There's possibly some more opportunity here, though it may come with some volatility.

EM peers continue to depict challenging dynamics for corporate earnings while India is witnessing steady growth in corporate profits.

Earnings: An Exceptional Time?

India Has Delivered Strong Earnings Growth

Among the global peers, India has promised and delivered good earnings. While other regions have seen flat to negative trend in corporate profitability, India has done relatively well.

Good earnings potential along with reasonable valuations indicates that it is a time to stay invested.

Margins: Turning The Tide

With input prices easing, margin contraction was set to get better. Q3FY23 results reflected it.

Margins have finally turned positive

The highlight of the earnings season is the margins turning positive. We have been arguing in the past three versions of Navigator that with wholesale prices easing faster than retail prices, it will be a time for margin stability & a likely expansion in next few quarters.

Sectors such as Cement, FMCG, agrochemicals, Autos directly stand to benefit as raw materials price falls and margins expand. We are on lookout for opportunities in these sectors.

Earnings Were Robust In Select Sectors

Net Income- YoY	FY17	FY18	FY19	FY20	FY21	FY22	FY23	Jun-22	Sep-22	Dec-22	Mar-23
Consumer Discretionary*	17%	11%	4%	-21%	-21%	33%	47%	31%	41%	51%	48%
Consumer Staples	14%	13%	13%	19%	0%	10%	22%	13%	16%	20%	22%
Energy	-3%	9%	28%	-21%	28%	41%	4%	47%	18%	6%	6%

Macros & Flows: A Bolt From The Blue

Global Lead Indicators Are Already In Slowdown

The slowdown is here, and we sailing in it. Can it get worse before it gets better?

The slowdown in global lead data is here. What does it take for Global Central Banks to pivot to rate cut?? Possibly, a turn in hard data.

US Federal Reserve, the ECB and BOE have been vocal about orchestrating a slowdown to control inflation. The lag effect of higher rates and rising borrowing costs is likely to show up in the second half of CY23.

However, the current slowdown could be shallow given that labour markets remain robust.

There's Marked Strength In Lead Indicators

The economic high frequency data has stayed robust

Real GDP exceeded consensus significantly in the last quarter

We have been highlighting robustness in most high frequency data. There were more positives than negatives all through. The big surprise came in when Q4FY23 GDP came in at 6.1%, approximately 100 bps higher. FY23 ended at real GDP growth 7.2% vs the consensus of 7%.

While the global slowdown worries prevail, its impact on Indian growth has been minuscule so far.

Read: [Tathya](#)

Easy Monetary Policy + Digitization = Reflation?

Longest phase of surplus liquidity...

...alongside limited increase in rates can help sustained growth

Can digitization increase velocity of money? Studies say so...

As per the monetary economics, $Output = MV$ (Money Supply X Velocity of Money). We stand at a juncture where we have the least restrictive monetary policy tightening cycle and digitization, that is expected to help velocity of money. This can support India's growth

Private Capex Is Bouncing Back?

BSE 500 Capex is coming back...

...also seen in private sector having higher proportion of order awards

So far, the capex story has been that of public expenditure push. The tide is turning with private capex coming back, albeit from few sectors such as oil and gas. Given that interest rate cycle can ease and we are sitting in the least constrictive monetary policy, can we re-ignite the animal spirits? If yes, that will further add to the investments driven growth

DSP Capex Tracker: Scorecard Is Healthy

	Units	Mar-20	Jun-20	Sep-20	Dec-20	Mar-21	Jun-21	Sep-21	Dec-21	Mar-22	Jun-22	Sep-22	Dec-22	Mar-23	3 Year CAGR

Others	Others	0.6	0.4	1.8	2.0	7.6	63%	-11%	53%	33%
Total		6.7	-3.2	-16.5	3.7	23.1	100%	100%	100%	100%

India has been missing on its FII flows for a while. CY2023 has started on a good note but the flows are far from their potential. The sectors which have benefitted in this cycle such as Autos, Financial Services, Healthcare, industrials have gotten more flows. Cumulatively, however, with relative strength of Indian macros, better earnings potential and dollar weakening, flows to India should benefit.

Interest Rates: Long Pause?

Beyond The Pale Tightening, Can The Cycle Reverse Quickly?

Globally, this has been an intense hike cycle, to reverse quickly?

Policy rate hikes and cuts by central banks overseeing the 10 most traded currencies*

The post-covid hike cycle was significantly swift, delivering the most hikes in last two decades. In 2023, this has already to ease with global central banks opting for a pause. There's a case for inflation to ease fast, which can bring central banks to cut rates as soon as second half of this fiscal year.

If that plays out, dollar can weaken further and benefits to Emerging Markets could percolate. On the debt front, adding duration tactically would continue to be a preferred method.

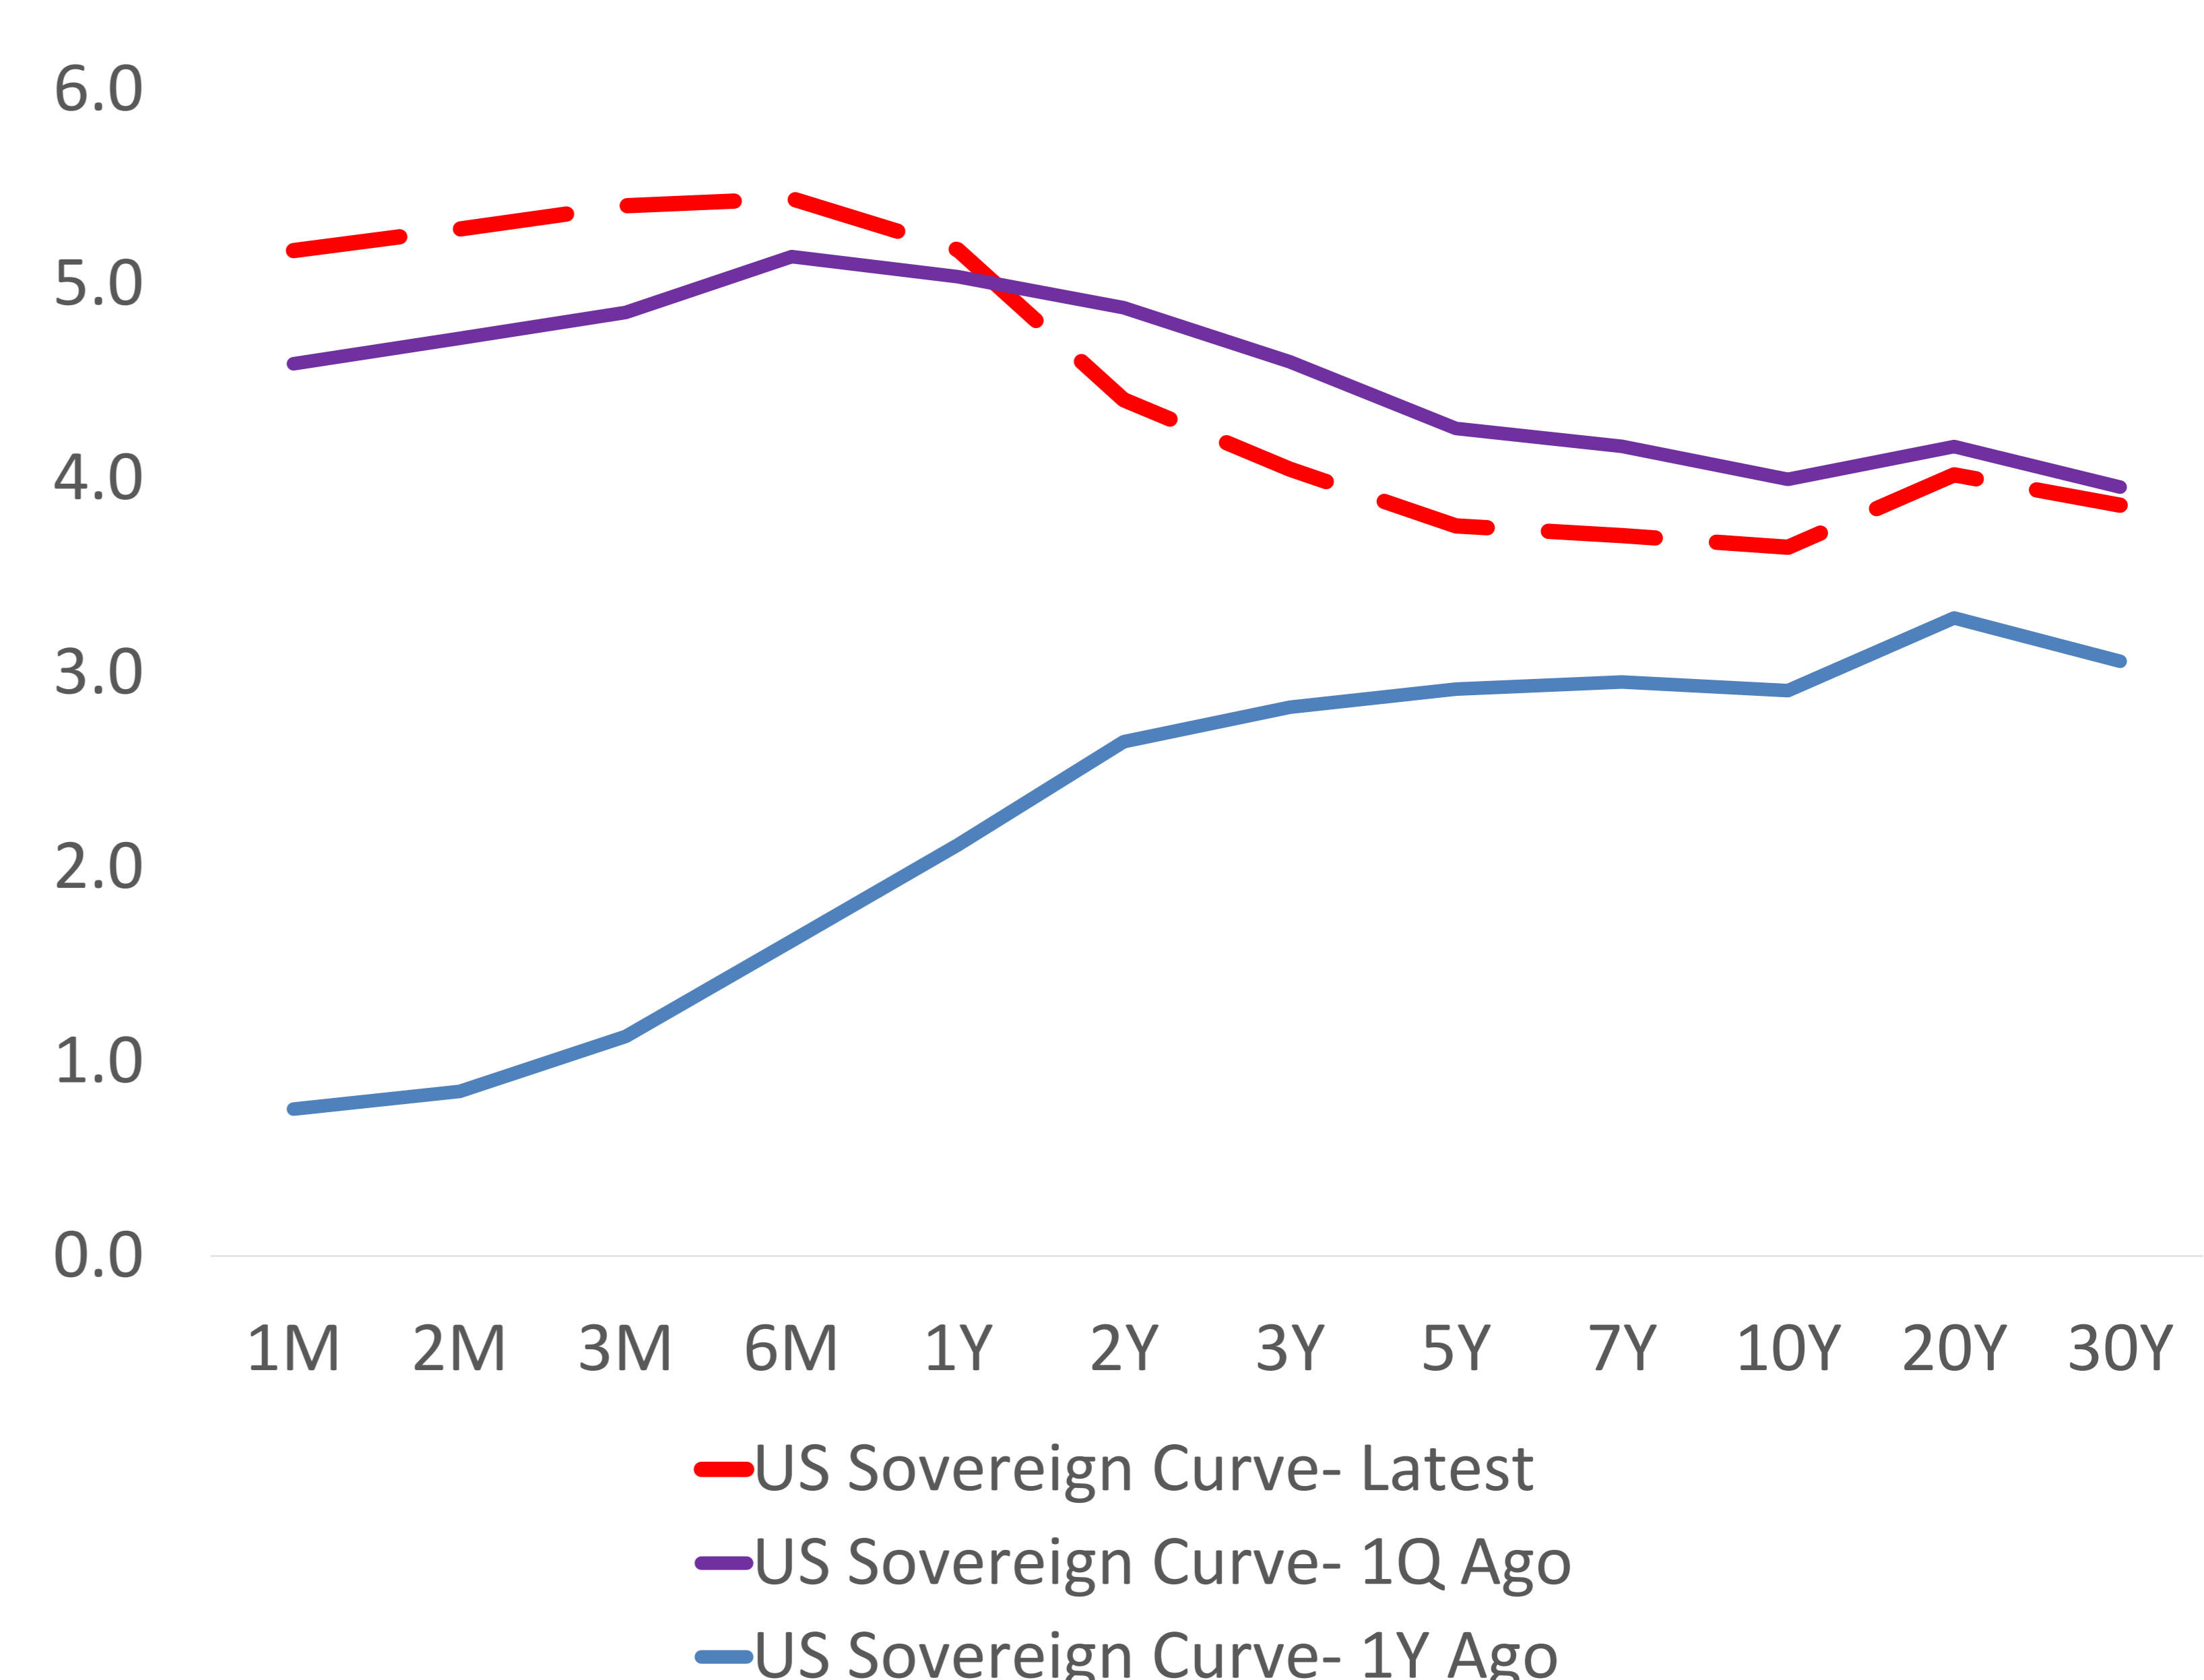

Read: [Converse](#)

Easing Policy Can Bring Down The Short-Term Rates

The short term rates have risen very fast, aping the rate hike by the central bank. These can move down very quickly when rate cuts start

US' yield curve is still inverted. Fed may not soft-land but for how long can US sustain inverted curve without compromising growth?

Sectors: Linking Data Trends

'Trickle Down' Is Finally Happening?

So far, the post-covid recovery has been about the strong, getting stronger. We argued in last Transcript and last Navigator that it seems the fringe is finally bouncing back.

As we re-look at the macro data today, there are more signs of rural recovery coming from lower unemployment, increasing wages and improving consumer sentiments.

We believe FMCG and 2-wheeler sector could benefit from it. Additionally, they have the advantage of lower producer prices and hence better margins ahead of them.

Disclaimer: The sector(s)/stock(s)/issuer(s) mentioned in this document do not constitute any recommendation of the same and the Fund may or may not have any future position in these sector(s)/stock(s)/issuer(s).

Good Time To Re-look At NBFCs!

While financials, especially banks have been our preferred pick, NBFCs can do well from hereon

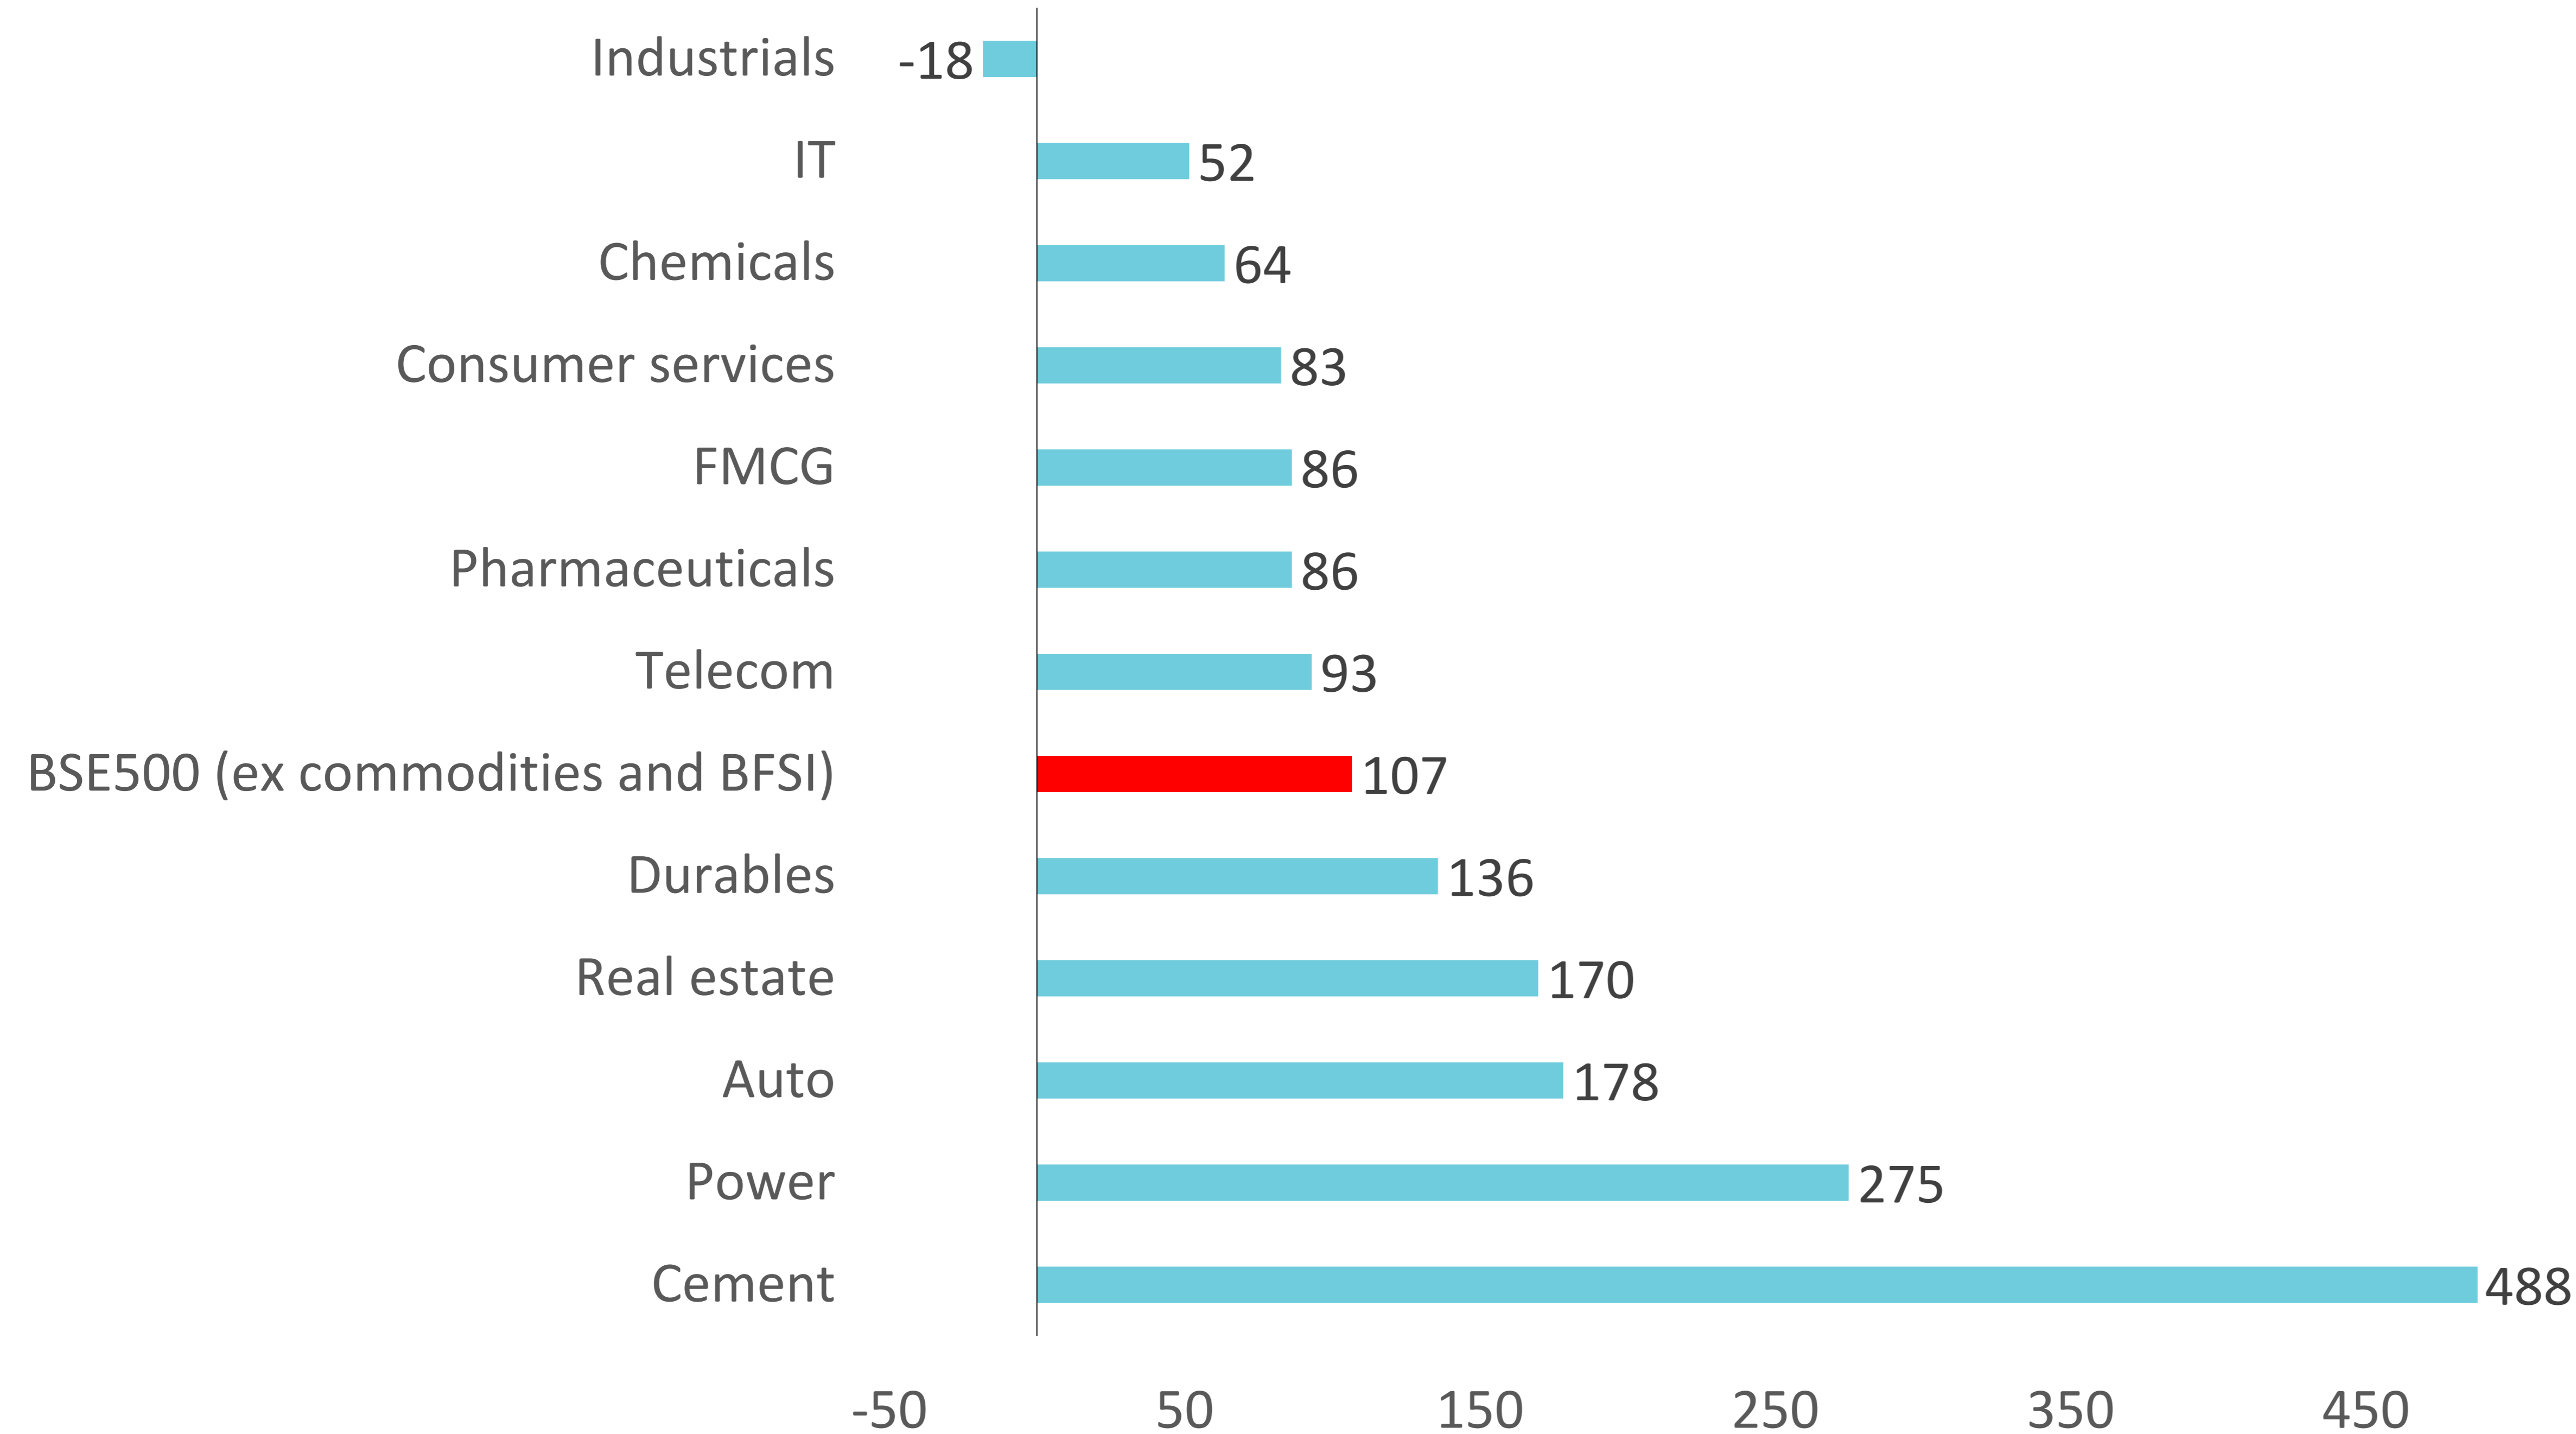

We have been bullish on banks for a while now and that call has played out well. Globally, monetary policies are now at a 'wait and watch' stance and will move towards cut in all probability.

NBFCs are likely to traverse the softer rate trajectory better than banks and may present another opportunity in the BFSI sectoral theme

The Beneficiaries of Margin Expansion From Lower Raw Material Cost

FY24E YoY change in EBITDA margins (bps)

We have been arguing that with commodity prices easing, there will be improvement in raw material cost which will aid margins of the companies.

This has played out this quarter with margins finally contributing positively to PAT growth. There are certain sectors which stand to gain from this margin expansion, ie, cement, autos, consumption goods and we believe one can potentially consider these sectors for further analysis.

A Decade Of Earnings

Share of EPS of top Sectors

Banks, IT, FMCG, Energy and Pharma have been consistent compounder in earnings in the past decade.

Let's sum it up.

Equity: Continued Active Management To Capture The Sectoral Churn

- At DSP, we believe in pre-emptive strategies. While there is always noise, we believe being invested is a better choice right now. **Margin expansion and robust earnings are likely to give fresh opportunity**
- This appears to be a relatively good time for active management with certain sectors/stocks having more opportunity. **Broadly, we continue to hold Financial Services, Autos and ancillaries, Healthcare & some construction materials. Additionally, we are scouting fresh opportunities in NBFCs and beneficiaries of rural recovery + margin expansion such as cement, agrochemicals, FMCG**
- There are pockets of opportunity in the market, and we continue to use a rigorous approach to pick quality names at good valuations
- Each of our Fund Managers deploys a rigorous framework to pick up the most profitable companies and we urge investors to read our frameworks and styles of investing.

Be invested – neither underweight, nor overweight

10Y Indian Gsecs have rallied 50 bps to 7%. For a further rally markets need to “price in” future rate cuts.

But the US labor, CPI and services data have remained robust. Unless US (or India) economic data softens, rate cuts won't be expected. Until then yields won't fall. In such a scenario, currently we prefer being neutral. If underlying macro data does not change, but markets rally on sentiment – we will sell and go underweight. If markets sell on panic, we will buy. However, if the macro data weakens, we will add duration without hesitation.

For money markets investment: Even though the yields have rallied, we believe, staying in the longer end of the money markets curve is more beneficial. The surplus liquidity will keep a cap on rates.

➤ **Reasons for our view**

1. Data just isn't weakening: The US data remains sticky. Indian inflation has softened- but this seems transient. Thus, why should central banks cut rates? But markets have priced in rate cuts.

2. Demand-Supply has turned neutral: Banks SLR holding has increased to high levels. But the demonetization may lead to more purchases. The Insurance/PF/EPFO will continue to buy. But SDL issuances may increase.

➤ **Risks to our view**

1. Date dependency – Continued strong job market could be inflationary, and similarly a weaker data will mean crash of yields. India data too is unsure, with El Nino/monsoon, Crude prices .

➤ **Read more on [Converse: Our Monthly Fixed Income Update](#)**

Commodities: Normalization Continues

- Commodity prices continue to face divergent cues. Bumpy growth in US and EU and a shallower than expected Chinese recovery has stalled demand side boost for most industrial metals and Oil.
- Supply side pressures have eased. The Drewry World Container Index (WCI) is now at levels last seen in 2017 and the COVID related supply side tightness is over.
- For Oil, OPEC has tried to balance the market by more production cuts. This has failed to create a large rally in oil prices as demand pressures remain mostly absent.
- **We expect commodity markets to remain benign and in correction mode for the next few months.**
- **Gold may enter a bull market as US Dollar weakens. Investment demand for Gold is gradually picking up and a new lifetime high could augur well for a fresh attempt to enter a bull market.**
